HOMES ARE HABITATS

A **habitat** is the natural home of a plant or animal. It is the place where a plant or an animal lives and grows on its own. Oceans, deserts, forests, and rain forests are habitats. Many plants and animals live in each of these habitats.

Draw a line from each animal to its habitat.

Habitats

A habitat is all the living and non-living things in an area. All around the world there are many different kinds of habitats. Plants and animals live in habitats that have the things they need to survive.

The rainforest and desert are both different types of habitats. Rainforests are wet, warm habitats that are crowded with plants and animals. They get a lot of rain. Deserts are dry habitats that get very little rain. They can be very hot and/or very cold and have more open space than a rainforest. Because these habitats are so different, the plants and animals that live in them are different.
